Furthermore, this report is proprietary, confidential and provided for the exclusive use of the recipient and may not be redistributed to or shared with any individual, company or entity outside of your organization without the express prior written consent of EIR.

The material presented in this report is provided for information purposes only and is not to be used or considered as a recommendation to buy, hold or sell any securities or other financial instruments. Information contained herein has been compiled by EIR and prepared from various public and industry sources that we believe to be reliable, but no representation or warranty, expressed or implied is made by EIR, its affiliates or any other person as to the accuracy or completeness of the information. Such information is provided with the expectation that it will be read as part of a mosaic of analysis and should not be relied upon on a stand-alone basis. Past performance should not be taken as an indication or guarantee of future performance, and we make no representation or warranty regarding future performance. The opinions expressed in this report reflect the judgment of EIR as of the date of this report and are subject to change at any time as new or additional data and information is received and analyzed. EIR undertakes no duty to update this report, or to provide supplemental information to any client receiving this report.

To the full extent provided by law, neither EIR nor any of its affiliates, nor any other person accepts any liability whatsoever for any direct or consequential loss arising from any use of this report or the information contained herein. The recipient assumes all risks and liability with regard to any use or application of the data included herein.

EIR provides custom research to its clients which are distributed on different frequency schedules. Custom research reports may provide different depths of analysis and more frequent updates based on levels of service and fees selected by clients.

No EIR directors, officers or employees are on the Board of Directors of a subject company and no one at a subject company is on the Board of Directors of EIR. EIR does not invest in any securities or manage any securities portfolios. Therefore, it would have no investment relationship with a subject company. Furthermore all employees are subject to restrictions on trading in energy company securities. The views expressed in this report accurately reflect the research analyst's personal views about the subject securities. EIR analysts are compensated from overall firm revenue only and are not compensated to express any view about an issuer or from proceeds derived from any particular transaction between EIR or any of its affiliates and an issuer.

Enverus and its affiliated companies, including EIR, serve over 6,000 customers globally and is reasonably likely to have received compensation for products or services in the preceding twelve months from any company mentioned in this report.

EIR currently subleases office space from an affiliate of Crescent Point Energy Group.

Building a better working world

POWERGEN INTERNATIONAL

FEBRUARY 21-23, 2023
ORANGE COUNTY CONVENTION CENTER
ORLANDO, FLORIDA, USA
POWERGEN.COM

ORGANIZED BY: **CLARION ENERGY**

10

California has been a leader in renewable energy with ~35% energy generated from renewable sources in 2021, a significant increase from ~15% in 2010

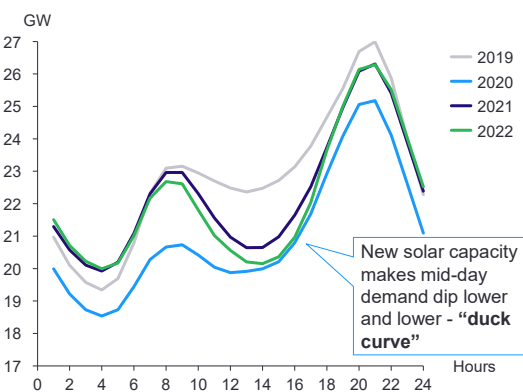

Source: California Energy Commission

11

Rising penetrations of variable renewable energy in power systems have increased curtailments in California

CAISO minimum net load by hour in April (GW)

New solar capacity makes mid-day demand dip lower and lower - "duck curve"

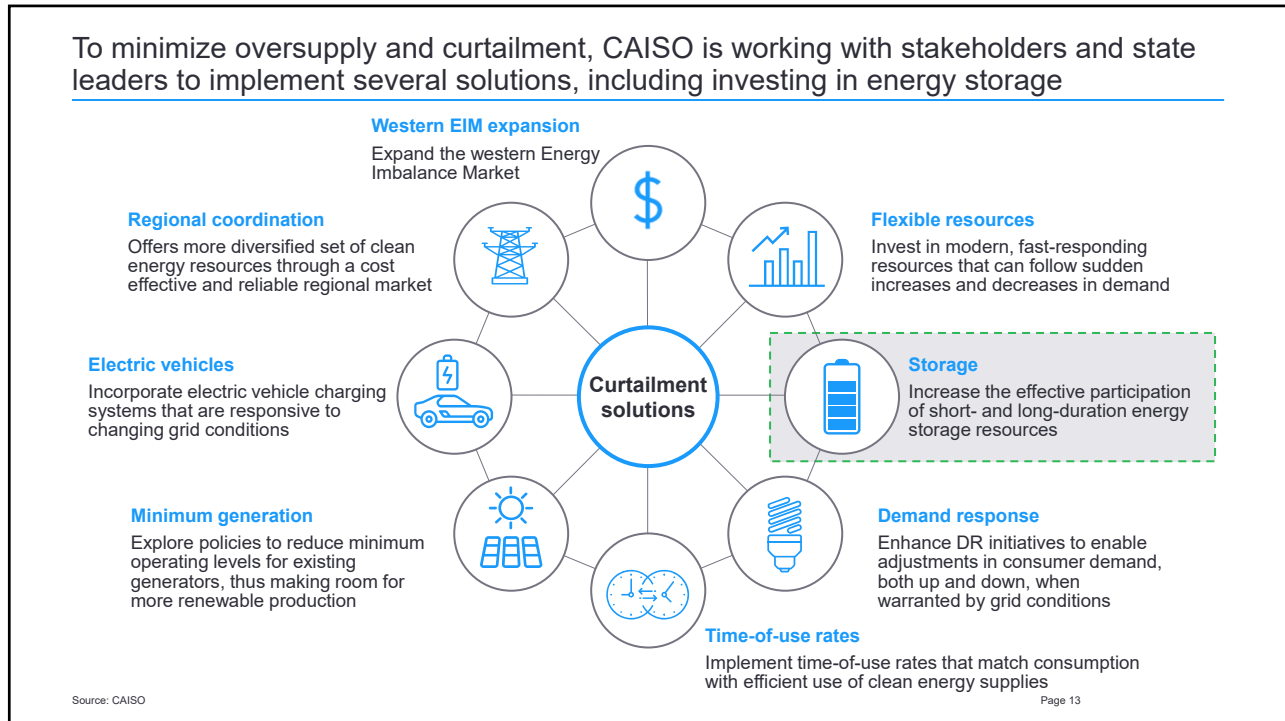

CAISO solar and wind production and curtailment (TWh)

The most common reason for curtailment in California is the excessive supply during low load periods

1. Curtailing % calculated by dividing curtailment and production each year
Source: CAISO

12

13

14

Significant progress towards CAISO's 2040 goal is expected in the near-term as utility-scale battery energy storage systems are developed

Energy storage partnerships in California

- 

▶ PG&E's Tesla megapack battery energy storage system (BESS) entered operation in April 2022
 - It is the largest utility-owned lithium-ion system in the world
- 

▶ Features 256 battery units with a capacity to store and dispatch up to **730 MWh** of electricity at **182.5 MW for up to 4 hours** during periods of high demand
- 

▶ Energy Vault and PG&E entered partnership to deploy the largest U.S. **green hydrogen long-duration energy storage system** in 2024
- 

▶ Energy Vault will own, operate, and maintain system and provide dispatchable power to PG&E under 10.5 year rolling agreement
- 

▶ **System capacity of 293 MWh (expandable to 700 MWh)**; system will power Calistoga, CA for 48 hours during outages

Near-term battery capacity installations in California (MW)

15

Among 20 states and districts that have legislations and executive orders for creating a carbon-free power sector, California remains ahead of clean electricity goals

Progress towards a carbon-free power sector, by state and district

1. 100% carbon-free means no carbon was emitted from the get-go, so no carbon needs to be captured or offset
 2. Carbon neutral refers to achieving net zero carbon emissions by balancing a measured amount of carbon released with an equivalent amount sequestered or offset, or buying enough carbon credits to make up the difference
 3. 100% renewable refers to companies buying enough renewable energy sources (e.g., solar power) to match its annual use
 Source: Clean Energy States Alliance; California Energy Commission

Page 16

16

The federal government has announced fundings and tax credits to advance energy storage technologies and drive new installations

Incentive type	Program	Agency	Description	Amount	Timeline
Grant	Energy Storage Demonstration and Pilot Grant Program	Department of Energy	▶ Carry out 3 energy storage system demonstration projects	\$355M	Application estimated opening Q3 2023
Grant	Research to Enable Next-Generation Batteries and Energy Storage	Department of Energy	▶ Advance fundamental knowledge for next-gen rechargeable batteries	\$125M	Application close in May 2023
Grant	Long-Duration Energy Storage Demonstration Initiative and Joint Program	Department of Energy	▶ Composed of demonstration projects focused on the development of long-duration energy storage technologies	\$150M	Closed in Q4 2022
Tax credits	Investment Tax Credits for Standalone Energy Storage under Inflation Reduction Act	Department of Energy	▶ Standalone option decouples developers from need to pair with solar PV ▶ Energy storage projects of 5kWh or more will be eligible	6% or 30% ¹ investment tax credits, potential for higher percentages ²	Effective 2023 - 2033

1. Projects not meeting prevailing wage and apprenticeship requirements receive 6% instead of 30%
 2. 10% adder for domestic content, location in energy communities and/or disadvantaged communities

18

Hydrogen can be used to store surplus renewable energy for long periods of time, resulting in reduced curtailments and increased power system flexibility

Hydrogen production and energy storage

Decreases in hydrogen production costs are driven by electrolyzer and renewable energy costs

- ▶ Electrolyzer prices are down 50% from five years ago and renewable energy costs have fallen 50-60%;
 - Further decreases of 60-70% expected by 2030¹
- ▶ Improvements in electrolyzer technology are expected to reduce the cost of green hydrogen production 60% by 2030²

Hydrogen is a more efficient form of long-duration storage than batteries

- ▶ Hydrogen can be stored underground in geological salt domes for long periods of time at a very low cost
- ▶ Hydrogen provides an energy storage material with significant energy density

Hydrogen energy storage projects

- ▶ Based in central Utah, Advanced Clean Energy Storage Project (ACES) is one of the world's largest integrated clean hydrogen production and storage hub capable of providing long-term seasonal energy storage
- ▶ Aims to produce up to 100 metric tons (i.e., 26,847 gallons of liquid) per day of hydrogen from water and renewable energy sources using a 220-MW alkaline electrolyzer bank
- ▶ Hydrogen will be stored in two gigantic solution-mined caverns sited in the only salt dome in the Western U.S.
- ▶ NASA contracts McDermott to build its largest hydrogen cryogenic sphere
- ▶ Once completed, NASA will be able to store and process over 2m usable gallons of liquid hydrogen (i.e., 7,450 metric tons) for space launch support⁴

By 2050, **green hydrogen** could supply up to **25% of the world's energy needs** and become a **U.S. \$10 trillion addressable market**³

19

IIJA and IRA provide hydrogen-related funding programs that will serve as the backbone for future hydrogen generating facilities

IIJA and IRA allot \$11.2B for the development of hydrogen value chain across 4 programs, of which \$8B is to develop clean hydrogen hubs, \$1.7B is for fuel cell technology and \$1.5B is for R&D. An additional program will incentivize clean hydrogen production through tax credits.

IIJA Section	Program Name	Available Funds	Eligible Entities
813	Regional Clean Hydrogen Hubs	\$8.0B	Industry, institutions, government, organizations, tribal
Develop 6 – 10 regional hydrogen hubs that demonstrate production, processing, delivery, storage and end use of clean hydrogen and form the foundation of a national hydrogen network. The initial launch will fund \$6-7 billion, but DOE may issue a second launch.			
815	Clean Hydrogen Manufacturing and Recycling	\$0.5B	Industry partners (<i>still being defined</i>)
Provides federal financial assistance to advance new equipment manufacturing technologies and techniques for clean hydrogen processing, delivery, storage and use equipment as well as materials and component recycling processes.			
816	Clean Hydrogen Electrolysis Program	\$1.0B	Industry partners (<i>still being defined</i>)
Fund research, development, demonstration, and deployment efforts to reduce the cost of clean hydrogen production to \$2/kg ¹ by 2026 using Electrolysis.			

IIJA Hydrogen Breakdown

IRA Section	Program Name	Available Funds	Eligible Entities
22002	Rural Energy for America Program	\$1.7B	Rural communities, agricultural producers (<i>still being defined</i>)
Provide grants for hydrogen and fuel cell technology projects and underutilized renewable energy technology projects.			
13204	Clean Hydrogen Tax Credits	\$0.60 - \$3 / kg	Hydrogen producers (<i>still being defined</i>)
Provide credit for facilities that produce clean hydrogen. Credit amount depends on the facility's lifecycle greenhouse gas emissions and compliance with workforce guidance.			

IRA Hydrogen Breakdown

1. 2020 cost of hi carbon grey hydrogen is ~\$2/kg and green hydrogen is \$2.5-6.80/kg at point of production
2. Federal hydrogen funding breakdown does not include the funding available through the Clean Hydrogen Tax Credits from the IRA

Page 20

20

The Infrastructure Investment and Jobs Act promotes a clean hydrogen economy through a \$8 billion program for regional clean hydrogen hubs among other programs

Overview of hydrogen programs

In November 2021, President Biden signed the Bipartisan Infrastructure Bill into law, which covers \$9.5b for clean hydrogen programs:

- ▶ \$8 billion for regional clean hydrogen hubs across the U.S.
- ▶ \$1 billion for clean hydrogen electrolysis program
- ▶ \$0.5 billion for clean hydrogen technology manufacturing and recycling RD&D activities

In June 2021, the Department of Energy (DOE) announced its Hydrogen Energy Earthshot, which aims to reduce the cost of clean hydrogen by 80% to \$1 per kilogram in one decade:

1 Dollar

1 Kilogram

1 Decade

Regional clean hydrogen hubs (H2Hubs)

H2Hubs will form networks of hydrogen producers, consumers, and local connective infrastructure to accelerate the use of clean hydrogen that can deliver or store huge amounts of energy

- ▶ H2Hubs selection criteria used by the DOE includes feedstock diversity, end-use diversity, geographic diversity, hubs in natural gas-producing regions, employment, etc.
- ▶ DOE will prioritize hubs that can provide significant training and long-term job opportunities for residents of the region
- ▶ DOE has until May 14, 2023 to select at least four H2Hubs from the proposals that are to be submitted this year

In May 2022, California announced its intent to seek a H2Hub, making it well equipped to lead the hydrogen market in the U.S.

- ▶ CA formed Alliance for Renewable Clean Hydrogen Energy Systems (ARCHES), a public-private hydrogen hub consortium, to accelerate the adoption and production of clean hydrogen technology in the state
- ▶ ARCHES unites public and private stakeholders to build a framework for a California H2Hub

Overall, these efforts are crucial to the DOE's strategy for achieving 100% clean electrical grid by 2035 and net-zero carbon emissions by 2050

21

New York is a rising pioneer in renewable energy as the state aims to reach 6-GW of energy storage by 2030

Roadmap to 6-GW of energy storage

In December 2022, NYSEERDA and the New York State Department of Public Service (DPS) filed New York's 6 GW Energy Storage Roadmap

- ▶ Proposes to expand New York's energy storage programs to address the increase in renewable energy across the state and enhance grid reliability and customer resilience
- ▶ Aims to support storage deployments estimated to decrease future statewide electric system costs by ~\$2 billion
- ▶ Supports NYSEERDA-led programs that can procure an additional 4.7 GW of new storage projects across three categories:
 - bulk (large-scale)
 - retail (community, commercial and industrial)
 - residential energy storage sectors
- ▶ Supports goal to generate 70% of state's electricity from renewables by 2030; 100% zero carbon by 2040

NYISO wind generation and curtailment in NY (GWh)

If this power (i.e., 83 GWh) were stored and then available on demand, it would be enough to power 11,500 homes in NY for a year

NY state energy profile

- ▶ In 2021, NY accounted for 11% of U.S. hydroelectricity net generation, and the state was the third-largest producer of hydropower in the nation, after Washington and Oregon
 - New York's 2,500-megawatt Robert Moses Niagara power plant is the nation's third-largest conventional hydroelectric power plant
- ▶ Natural gas, nuclear energy, and hydropower consistently generate more than 90% of New York's electricity

Page 22

22

Curtailments result in revenue loss for operators and increased cost for customers who are not served by the lowest cost resources

Types of curtailments

- ▶ **Economic dispatch**
 - While low-priced energy can push some renewable energy generators out of the market, negative-priced energy can give generators a strong incentive to curtail
 - Generators offer "decremental" bids to the ISO to reduce their output
 - Considered "market-based" because ISO's market software automatically adjusts supply with demand

- ▶ **Self-scheduled cut**
 - Targets generators who have contracts directly with utilities and other power retailers
 - ISO's market software will pick some self-scheduled generators to curtail based on location and other operational impacts but not on price

- ▶ **Exceptional dispatch**
 - ISO operators manually intervene and order generators to reduce output, thus preventing or mitigating conditions that risk grid reliability
 - Not preferred because it does not ensure the lowest cost resources are used to serve customers and it can reduce output of renewable plants

All types of curtailment can happen at the local level, to reduce congestion, or at the system-wide level, to reduce oversupply

23

The banner features the PowerGen International logo in the top right corner. On the left, there is a green square containing icons for various energy sources (solar, wind, hydro, geothermal, biomass, nuclear, coal, gas, oil) and the text "Energy Cast" in a stylized font. The central text reads "energy-cast.com" in a large, bold, black font. To the right of the text is a green circular logo with a stylized "EC" monogram. At the bottom, there are three logos: "ORGANIZED BY: CLARION ENERGY" on the left, "Listen on Google Podcasts" in the center, and "Listen on Apple Podcasts" on the right.
